MAN TO MAN Magazine) of February 1951) Article by Douglass J. Ingells, "Solving the Mystery of Ohio's Supersonic Explosions: Abstract:

Major Dick Johnson, pilot of F-86 Jet Fighter plane, on test flight at 45,000 feet (nearly 9 miles), making power dive, reported to ground radar crew: " We've passed the sonic barrier - it's smooth as glass..." He then pulled out of the dive and made a safe landing. (Time of landing not given). At 11;20 a.m. there was a terrific explosion over the city of Dayton (Ohio). "It rocked the area for miles.. windows bowed or were blown out, buildings shook. Wright Field, 7 mi. from Dayton, reported, "it shook things out here pretty bad". No explanation from anyone.

"Just before noon on the second day there was another blast... leaves fell from trees .. birds just disappeared. The blast was heard for 30 miles..."

At 3:30 pm, same day, there was a third blast -- 12 minutes later, still another.

On the morning of the 2nd day, Pilot Johnson was aloft and made another power dive. This was being observed from the ground, and it was followed by a "terrific blast".

On Friday, April 20, afternoon, a test dive was made, and the explosion followed about 25 seconds after the plane pulled out.

On one of the occasions mentioned, observers noted a blur of vaporwhich looked like a ball, enveloping the plane during its dive.

It is impossible to make out the exact facts concerning the relation between the time of power dive tests and that of the "explosions". But it clear that in at least two instances there was an observed delay of less than a minute. In the case of the Dayton blasts there apparently was a time lag of several hours. Full scale experiments by the Air Force established beyond doubt that the diving planes caused the blasts, and the newspapers regard the mystery as "solved" - it is a matter of the accumulation of shock waves in the atmosphere, following the plane and being bounced off the earth. However, Man to Man Magazine does add,"the scientists will be working a long time unscrambling the real cause."

ML

Comments of Assoc. Edw. S. Schultz

"The subject matter released in the article in Man to Man magazine is momentous enough for a twin page spread in LIFE and other journals, but so far as I know, no such write-up has occurred. If any Associate knows of other articles he will do us all a favor by giving the exact references. After the above article a lead curtian seems to have been dropped on the subject...

I do not go along with the glib "explanation" made by Brass and quoted in the article. There are too many loose ends. Too much on a par with the "Discs are balloons" type of explanation. I've read in other references (of the few that appeared) , as in the article quoted, of the delay in the sonic explosion. How can a shock wave, travelling as fast or faster than sound, arrive and cause the blast considerably later than the plane that caused it?

My theory is that any object travelling beyond supersonic speeds, disturbs one or more, or all four of the grades of etheric matter of our physical plane - i.e., where the gases leave off, and that such speeds set up stored stresses in the ethers

---

ATTENTION OF TRANSCRIPT SUBSCRIBERS: I hope (at this present writing) to include part, perhaps all of Transcript 13 along with this Release. The Release material seems to me to be of unusual importance, also the pressure of work in the office is considerable - so we ask your indulgence if the Transcript is more brief than usual.

ML

which can come back as a blast. Note that a good many meteorites produce such ex - plosions. If I recall right, some Flying Discs when sufficiently materialized and travelling at supersonic speeds in the lower atmosphere, have also produced such blasts. Moreover, I believe that blast-creating stresses can be stored up in the ethers, by other means than fast moving aircraft. Such powerful blasts, coming out of the sky, have been heard in almost all parts of the world, in skies devoid of visible aircraft or discs. I, along with the whole population of Buffalo (N.Y.) heard such a blast from the sky some years ago - for which no cause was ever found. There is a new and wonderful field of research in all this.

4) This ether stress theory, as the cause of the sonic blasts, lends weight to my other theory, expressed for the last year or so - that the Disc Etherians, judging by certain evidence, are soured on earthian aircraft in general and jet planes in particular. It has been my thought that many, if not most of the inexplicable air disasters are likely to be due to Etherian intervention. I have a file of from one to two hundred press clips of air disasters that don't make sense in terms of normal causes. Every day, almost, there are more headlines of this kind. (See Art. "Invisible Daath", FATE magazine, Dec. 1950).

5) Our earth-plane performances seem to earn the displeasure of Etheria on at least three counts: (1) Radar and similar radio frequencies (2) ether stresses set up by supersonic jets, and also the tips of propellers of of ordinary planes, which often spin at supersonic speeds (3) the known fact that some aircraft carry or will carry A-bombs.

6) But to get back to jets moving at supersonic speeds. The press is full of items about jets meeting their doom - crashing, exploding, colliding. Some months ago about eight of them crashed in one flight. The official explanations of this were a new high in sheer nonsense. I suggest that we all watch the daily press for more indications that something new, different, and deadly is picking off aircraft in divers violent ways. Note the collisions of jets that have the whole sky to wander around in. Some catch fire or explode shortly before or after landing. Some just disintegrate in the air, like the passenger plane over Lake Michigan, a year or more ago.

7) Why should such things happen more often to U.S. planes than to others? Because, as we all know, the U.S. is most active in terms of radar, jet plane activity, and A-bomb manufacturing and testing.

8) You can use the sum and substance of this in any way you choose, but it in the form of a personal memo. to you and perhaps not well phrased for publication.

E.S.S.
9-26-51.

Notes: Para. 4. The M.P. Controls asserted several years ago, that the release of atomic energies was causing serious discomfort to some of the etheric regions and peoples, and that this might force them to intervene in our affairs. Then, later, it was hinted that the Etherians had decided on a different strategy. But since then the development of supersonic speed may have aggravated the situation to a point where intervention in some form becomes necessary.

In the foregoing quotations from Assoc. E.S.S. I have deliberately omitted his most sensational conjecture of all - contrary to the practise of various saffron-hued contemporaries, which would have headlined it. In the phenomena of etheric re-percussion, plus the fact of the time-lag, we may have a weapon, or the clue to a weapon of devastating and extraordinary power. Consider the effect of a dive, at supersonic speed, of the single plane over Dayton. It is sheer nonsense for the authorities to contend, as did an officer at Wright Field, that these concussions, tho' loud and frightening, are harmless as the bursting of a paper bag. The citizens

of Dayton, picking up broken window glass and crockery, will not concur (nor will the children, the aged, and the sick). Suppose not one plane, but a dozen, fifty, a hundred executed such dives over Dayton or any city, simultaneously or in fast succession. Here, the factor of the time-lag enters the picture. It may be that this can be controlled or estimated to some degree. In any event it seems certain that the plane itself has time to escape from the radius of the concussion. Our layman guess is, the enormous concussion waves would shake down thousands of structures, wreck or damage all kinds of apparatus and installations - and that the effect on the population wouldbe indescribable disaster - insanity and death.

11) Meanwhile, the attacking force is not necessarily engaged in combat. It would not be necessary to drop a bomb or fire a shot.

12) And a 'supersonic attack' of this type can, theoretically at least, be carried out by robot planes or guided missiles, the only basic requirement being that of supersonic speed.

13) Such considerations must long ago have occurred to persons in authority - but they have not to my knowledge been discussed in any public print. Yet the basic facts are known, and accessible to the public, and are familiar to many thoughtful individuals. It was our alert Associate E.S.S. who brought them clearly to the attention of your BSR Director. We take the ground that no official taboo exists on this subject matter, and that we do no more than direct attention to known facts, in the interests of public information.

14) The interest of BSR Associates, however, is not confined to the uses of warfare. We are deeply concerned with what may prove, in the end, an even more fateful involvement - that of the etheric regions and peoples. It seems certain, to some of us, that the huge atmospheric concussions are not a matter of the atmosphere alone. You will note the brief disposal of this latter notion, in paragraphs 2 and 3 of the quoted comments of Assoc. Schultz. It can be dismissed on grounds familiar to contemporary physics, and the phenomenon of a long-delayed time-lag alone is fatal to the notion, that sound waves in the atmosphere alone are concerned. With this in mind, I made inquiry of the Mark Probert Controls - whom we have been consulting for five years past and who have not yet failed us with information and wise advice. Their response to this inquiry is summed up* below:

The M.P. Controls: Professor Luntz. (Q. Does the flight of a plane or any other object at supersonic speed have any effect on the ether(s)?.

(Ans.): Yes, the flight of planes at supersonic speeds has a profoundly disturbing effect on the ethers and on many of the etheric people. It is comparable to the effect of releasing atomic energy - the atomic bomb.

16) The ethers are of enormous density. They are, nevertheless, atomic or particulate in structure and have directional flows.

17) Supersonic speed within the terrestial atmosphere disrupts these flows more

---

* Para.14, sup.

We greatly regret that neither a stenographer nor a voice recorder was available at this meeting (Sept. 27,'51). The information was compiled from memory immediately after the sitting, but the Control spoke rapidly and at length, and there were also interruptions and various difficulties. These notes are therefore subject to corrections and restatement, and if these are necessary we shall present them at a later time. ML.

than does equal speed above the atmosphere.

18) 'If the speed of an object is sufficiently increased it will reach a point where it passes into what you sometimes speak of as another dimension, or at least out of 3-dimensional space. *

19) 'The effect on the ethers is due to a heating and expansion, subsequent con - traction, then expansion again etc. of etheric atoms.

20) 'Yes, the flying discs often move at supersonic speeds, but do not disturb the ethers, simply because they travel on or with the magnetic flows or ether cur- rents. This will have to be learned by your scientists before flight speeds can be increased much further.

21) 'Some of the concussions in the upper atmosphere noted by some of you in the last 2 - 3 years, are lag effects of planes diving at great speed. The relation to planes has not been noticed because of this time lag, which may be considerable, or an hour or more or less (I have no exact figures about that). But a few of your scientists have guessed at this connection."

- end of Luntz communication -

22) Before leaving this remarkable subject matter, let me again summarize our present outlook on the subject of the Flying Discs:

23) According to lengthy accounts given by the Control Yada di Shi'ite, one type of these Discs was well-known in the civilization of YU, in the Himalayas, several hundred thousand years ago. It was manufactured and commonly used by the YU people. Thus, it is probable that earth science can again construct and use them. (2) It is thus theoretically possible that some type of Disc has been constructed on earth in our own time - tho' if so, we have no clue to <u>where</u> or <u>by whom</u>. (3) The visiting ether craft, including the disc shapes, are of all forms and sizes and come from various etheric regions of our solar system, and from beyond. They have various purposes and employ more than one form of propulsion (4) Those which come from "be- yond the galaxy", some hundreds of light years, do not traverse space in any mater- ial form known to us, but by a species of apportation, or projection of thought- forms, with subsequent "materialization" when in our magnetic field.

24) It is certain that a few Discs, and perhaps other types, have landed on earth- and that they are not entirely perfect machines, but subject to occasional accidents. In speed, power, and control they far surpass any aircraft known to be of earth construction. -- The M.P. Controls affirm that various types of ether craft have been used for inter-planetary flight and that our earth has been colonized from other planets and from the moon, in ages past.

25) It is highly important that our Associates keep in mind the great range and variety of ether-ship phenomena -- and that no single explanation will cover every- thing. It is likely that one or more of the Discs will again fall into our hands,

---

* Para.18: Cp. statement of Pilot Harold Calkins (M to M Mag., cit.): "You don't feel anything and you don't hear anything. At four-and-a-half G's when you pull out you don't feel anything, either. Yes, I did hear one of the explosions, over the radio. I didn't sound very loud. Like a crack of static, but you could hear it all right. You feel a slight buffeting of the controls as you approach the sound barrier but once thru it everything is smooth - no sensation or sound of air rushing by. It's like being deaf for a while. You don't even get a sensation or feeling of any kind when you pull out". 'There is the scream of the diving plane (to the ground observer) but nothing else - until 40 seconds after the pull-out. Then WHAM! WHAM! WHAM! A clap of thunder and the slap of air against your face.'

that it will be studied, and that the details will be partly released to the public, with intent to appease curiosity and to convince everyone that ALL genuine sightings of all types of ether ships are nothing more than a new triumph of terrestial science. The thousands of pages of data on this subject are NOT susceptible of any such simplified explanation - and we urge all Associates not to be misled by tactics of the sort indicated.

---

26) (We now offer our Associates a further quotation from the Luntz Control. This contains what is, so far as I know, the first intelligible explanation of what is going on when a dowsing rod or other dowsing instrument moves in opposition to the muscular control of the experimenter. When a forked stick twists so violently in one's hands that the bark of the stick or the skin of the hands gives way under the effort to control and resist the movement - it is then incredibly stupid to insist that the muscles of the operator are causing the motion. Yet the movement takes place, against both effort and desire).

Professor Luntz: "The explanation, that the Cameron water compass or any other dowsing instrument becomes charged by the magnetic field of the aura, is in a measure correct, but is far too simple.-- An "external object" affects our senses (which are not really "physical" at all), and this effect passes to the nerve system and muscles. The life energy then posits in space the object which we see - yet this positing is not the beginning of the process. You asked for an explanation in terms of physics, yet how can one avoid metaphysical concepts entirely? . At any rate, there is a two-way flow to be reckoned with. Now, in dowsing the higher consciousness (or "subconscious" or "co-conscious") being above all space limitations , knows exactly the location of water, oil, metals etc. It reports this, via the "rod" to the nerve system and muscles. When a rod or instrument moves against your muscles, when you try to restrain it and cannot, what you are dealing with is an etheric or magnetic flow which is governed by the subconscious psychism. This flow is set up by the higher self, to and from the object sought, to and from the operator. Therefore a rod or "compass" will not work unless held by the operator, and apparently his arms must be free - i.e., the instrument will not work if set in a vise, even tho' the operator hold his hand on it to impart a charge of the auric magnetism. It will not work any more than your cut-off hand would work. (The rod or instrument becomes temporarily a part of the body, an extension of the organism). -- Yes, we shall cooperate with you and shall try to move the bob of the water compass from our side while it is held by you, and while it is fixed in a given position by you - but I am doubtful about the success of this latter attempt.'

NOTE: Release 9-A-51, accompanying RR vii-3, described an experiment in which the Cameron water compass enabled Assoc. Cameron to locate the invisible etheric form of the Control Natalli, when the later left the aura of the medium (in trance) and sat down on the floor facing the medium. There is also excellent evidence that this same instrument will detect the presence of any etheric object, including projected thought-forms - e.g., a visualized cube placed on a table (mentally) can be discovered and outlined by the Cameron instrument. A "charge" imparted mentally to an object can also be detected.

There is no great msytery about the construction of this "water compass", but none of them have as yet been constructed for sale. We recommend, however, that Associates interested in this general subject obtain one of the ZNO devices invented by Mr. George Wallace, Box 158, Beaumont, Calif. A little practise with this instrument also obtains remarkable results for many people. Both instruments verge on regions of telepathic and (probably) spiritistic communication. (The price of the ZNO is $3.50. BSRA Hdqrs, does NOT have either of these for sale).

SPACE STATIONS etc.

Assoc. Don. Green (9121 So.Dale Ave., Rt. 2, Anaheim, Calif.) sends us the following quotes from the Santa Ana Register of 9-10-51:

Information bearing on this subject is wanted by BSRA Hdqrs. Special attention of BSR Assoc. who are members of the Rocket Societies.

"Lon. AP: A German rocket engineer declared today Russia is racing the West on a project to set up a military space station 300 miles from the surface of the earth. H.H. Koelle of Stuttgart, Sec. of the German space research Society, said it is an open secret among rocket experts that the West and East are both working on this project with the greatest energy. He told the Congress on Astronautica that such an artificial moon could be placed in the sky at a cost of around a half billion dollars. The first inking of this plan... came in the annual report of the late James Forrestal, then U.S. Defense Secretary, in Dec. 1948.

Forrestal Report: This Report disclosed that an "earth satellite vehicle program" on which the Army, Nave, and Air Force had made separate studies had been coordinated that year under America's central gudied missiles project. Ahy developments since then have been top secret.

"Such a space platform, rocketed into an orbit around the globe, could be used for launching guided missiles with atomic warheads. It would be invaluable as a military observation post . . . and could also be used as a take-off point for rocket trips to the moon and planets of the solar system. For this reason, Koelle said, rocket researchers "have to endeavor to remove this work from secret classification for the benefit of the whole human race." *

"Koelle showed the Space Congress a model of a space station which would weight 150 tons and accomodate 50 to 65 persons.. It would consist of a cylindrical rocket with a ring of 38 rooms connected to it by pipes. The assembly would rotate at 3½ turns per minute to simulate gravity. The station could be built for about $518,000,000 and would cost $40,000,000 to $50,000,000 a month to maintain.

" 'For perhaps one percent of the expenditure likely to be involved in a third world war', the youhg German said, 'we could construct several space stations, build a moon rocket, and in time send an expedition to Mars.' Peaceful uses would include relaying short wave radio and television, making long range weather forecasts, and watching national trouble spots for the United Nations.

"The Space Congress is an unofficial meeting of 50 scientists from 8 nations."

---

* Re "secret classification" etc. On "general principles" the BSR Director sympathizes with this point of view, hence is disposed at least to give publicity to any authentic information available. Cooperation - and objections also - are welcomed.

News Clips: In six weeks following July 21, 15 air accidents in Alaska, 98 persons dead or missing. All planes grounded temporarily Sept. 18. --- Newman, Calif. Earth in one spot spurts flame when rubbed; no gas or oil found - and no explanation. --- Over Sandy Hook, N.J. Two AF jet pilots chased (at 450 mph) an "object" moving 900 mph (estimated) but (luckily & naturally & as usual) failed to catch it. Bal-locnatics please note. --- Night Blast over Sioux City, loud & with strong concussion; some smoke, NO explanation--- Huge irregular object glowing with fierce blue-green light, above Mountain Center & Idyllwild, Calif., "beautiful and terrifying"--- Eruption of Etna recalls remark of M.P. Controls, that Etna and Pelee would become active, and seismic disturbances on west coast of USA soon afterward. A series of minor shocks in Sou. Calif. have been recorded lately. (Credit Sylvia Weaver, Schultz, Nothdurft, Hilliard, Wilma Shade and others).

RELEASE 10-A-51 -and - TRANSCRIPT 13 -- OCT. 1951.

PRELIMINARY NOTES

(Due to the great importance of some of the following material, we vary a little from our usual procedure, and combine a 6-page Release with a 4-page Transcript. Also, we are sending both items to many Round Robin readers whose membership normally includes the Release only. We wish them to become acquainted with the Transcripts, and also we want all BSR Associates to get the gist of the data offered at this time. Let us itemize some of this material:

THE RELEASE: SUPERSONIC SPEED - the explosions - the ethers - the time-lag - a possible weapon - the Etherian peoples - opinions of the Mark Probert Controls

THE CAMERON WATER COMPASS - the first explanation of the "contrary drag" in dowsing instruments - the water compass locates invisible (etheric) persons and objects.

SPACE STATIONS - the Koelle report - the Forrestal Report. News items concerning recent phenomena.

THE TRANSCRIPT: Yada di Shi'ite on radiactivity of the earth & the effect on health and disease - a solar ray, and disintegration of Ra and other atoms - the nature of PK effects - and of telepathy - time-lag in the ethers - and in telepathic experiments - the halo, and other auric phenomena. The Natalli Control: his confirmation of the findings of the Cameron instrument - the contact with Nikola Tesla - the Cameron instrument locates and describes Natalli's invisible form.

Of these, the principle of the time-lag (expounded by Assoc. E.S.S.) & its remarkable possibilities; the achievements, actual and potential, of the water compass, & Natalli's crucial experiment - are of outstanding, even sensational importance. The performance of the Cameron device (water compass) may in time be recognized as opening a new era in psychic research, and in psychic, occult and spiritistic studies generally. It is an instrumental demonstration of the presence of persons and objects on the etheric plane of existence - and a demonstration which does NOT depend upon mediumship or psychism.

That does not mean that it can be operated offhand by anyone. It requires a little skill and practise, like thousands of other instruments.

We do not say that this instrument will be accepted everywhere and at once. No instrument or technique of revolutionary nature can enjoy such reception. A decade or a generation perhaps - but the instrument will stand the test. It will be derided, abused, and neglected - and it will be "explained", but it cannot be 'explained away.'

The BSRA is a clearing house for ideas and facts in Borderland fields. We lack lack funds and facilities for active experimental work. But we have been instrumental in offering to the public (1) the only explanation of the ethership phenomena (2) the re-opening of "Vitic" studies (3) the Morley-Martin proofs of abiogenesis (4) contributions to the work of Max Freedom Long and the Huna Associates (5) the brilliant achievements of the Koch therapy (6) concepts and evidence of the etheric worlds and people (7) the remarkable and invaluable communications, in science and philosophy, of hundreds of pages, of the trance Controls of Mark Probert. Every one of these has, so far, gained ground. To them we add the data emphasized in this Release and Transcript.

A great amount of scientific knowledge, as yet not usable, is stored away in the laboratories and research libraries of our time. We say only that our BSRA data are usable, and vitally important now, and that "orthodox" science cannot be depended upon to present them.

We ask of our Associates an allocation of work. Can YOU take up some special problem, under BSRA auspices? And as always, the BSR Foundation needs financial help - if you have generous and sympathetic friends.

"May the Great Nameless One walk with you - M.L.

MARK PROBERT SEANCE of Sept. 17, 1951. Eleven persons present. Deep trance mediumship. This was a special meeting called for the purpose of getting certain technical and scientific information, The first half-hour was taken up with discussion of construction details of an experimental "flying disc" model. By advice of the Controls (with which we concur) these cannot yet be made public, nor would they be of much interest in their present stage of development. We hope to present any worthwhile results at a later date).

(Q. by ML. One of our Associates has sent us a question as to certain areas of the earth's surface that are said to cause malignancies - cancer and the like- and other areas which are said to be curative in nature. Would you care to speak of that?)

Trance Control YADA DI SHI'ITE: Radioactivity in different parts of the earth and their effect depend largely on the individual, the nature of his chemical make-up and his psychic sensitivity to radiations or vibrations of certain minerals. To some, such metals as gold, silver, and copper are very inharmonious, to others, not so. Some have a psychic affinity, some a psychic repulsion to them. If these radiations continue to discharge themselves into those who are psychically opposed to them, they will create conditions in the body that will bring about chemical changes resulting in cancer, or tuberculosis, and other diseases.

(Q. by ML). Ans. No, no generalization can be made. It depends on the individual and the chemical elements in his body. There are regions claimed to be specially good for certain diseases - but this has really nothing to do with atmosphere, temperature, or weather conditions, but rather with radiations of certain elements in the earth which attract other elements in the atmosphere, making a combined rhythmic flow which is helpful to the sufferer.

(Q. by F.O.) Ans. Yes, this would have an opposite effect on some; they would psychically rebel against it and feel all kinds of irritations.

(F.O. How could one tell whether they would be helpful or not?)

"Possibly by what your friend Mr. Cameron is doing - measuring radiations. But much more will have to be known about these lines of force existing in your atmosphere and running from the earth into the atmosphere, and from it into the earth, before you can have anything like a complete picture of what is going on.

"Everything sends off its own kind of aura. There are various bands or rays that come from substances, as you have in your atom, alpha, beta, gamma and so on. Each ray has its own particular rate of motion. It may send off, say, one and then one-two pulsations; and then one again, and then go back to one-two, and then one, and then one-two, and one. Other substances seem to send off double pulsations, and then you have 2- 4- 8 (and repeat?*). Did you know of that?

Each substance has its own particular ray and place, and can be very helpful to some and harmful to others. Not only to human beings, but to animals, birds and plant life.

Many minerals get their rate of motion or escape from a certain ray from the sun. This ray in working in a metal will either keep its rate of escape or break down at a certain tempo - as in radium. You have noticed that radium cannot be changed in its rate of breakdown into lead. You have tried all manner of things and still nothing changes it. That is because there is a radiation from the sun, a particular band or wave length, that keeps it steady so that nothing can change it. You may say this wave length is a particle belonging to the cosmic ray. That is the determining factor, why one atom of radium breaks down and another does not.

(VLC. I had never thought of the rays given off by substances as being anything

VLC. I had never thought of the rays given off by substances as being anything but a regular rhythm radiating within the substance . This would enormously widen the numerous wave-bands that could be had in a given range without interference, just by the different rhythms.

YADA: "You know, you have today one of the most marvellous things that have come to humanity - the Quantum theory. You measure by that, and using your instruments you will find that by making mathematical computations you will find these pulsations.

ML) In this connection I want to ask you about PK effects. Take the case where the fall of dice is affected - is the PK effect possible only within the limits of the aura?

"Not exactly within the limits of the aura, no. In fact, it can be extended to a great distance beyond the aura - but with some people only within the aura, depending on their mental powers of concentration. Some take several minutes, let us say, to concentrate on a force going into action; others can do it almost instantaneously."

ML) We can understand in a way the mental activity reacting on the magnetic field, but suppose you get outside the aura entirely - does the nature of the operation change?

VLC) Perhaps the ionization of the air ... I believe it is caused by the lining up of the molecules of the air in some way.

" There is an alignment, definitely - somewhat on the order of the alignment of atoms in the magnet, and it is also this ability to align the molecules in what is called space. It reaches not into the atmosphere, but deepr, into what may be called the etheric field.

VLC) That would permit of communication between worlds by telepathy, would it not?

"It is very likely, because nothing travels. It is not a travelling, but a putting into alignment of the molecular structure of the ethers. When you send a message to someone telepathically, there are no waves coming out of the brain, no actual waves - but these energy waves which are three-dimensional, which come from the brain structure, they act as a kind of central field or core, and from this core the force will control or align the molecules in the ether. The ether - not the atmosphere. The atmosphere is as nothing.

ML) Just now I am interested not in the telepathic side of it, but in the control of the fall of the dice at a distance of three feet, if that effect is not dependent upon the dice being in the actual aura, or magnetic field of the body, then it may be possible to affect apparatus by mental means, at a great distance. We could have a kind of telepathy, not by reaching the other person's mind direct, but by reaching apparatus that the other person possessed.

"That is right. It is very much like creating a wire. This wire that is like a telepathic wire, or that goes out to control matter, such as the falling of these - what do you call them - dice? - it is like an actual thread, and it is made up of points, with minute spaces between them, so it is like balls striking each other.

VLC) In my experiments I have found a beam from the left eye, or the region around it. It just slowly creeps out into the atmosphere. It takes about 20 seconds to energise the air to a great distance - I don't know exactly how far. It extends out like a finger from an amoeba, and it stands there for about 20 seconds after you stop the emanation - after you purposely turn it away.

(Yada speaks aside in the YU language, to someone on his own side).

ML) Our Associate Edward Schultz points out that the principle of the time lag may be as important as the principle of critical mass in physics. I take it that delayed action in the atmosphere is due to the ionization of air particles. What about

delayed action? Is there any time lag in the ether?

YADA (Control): The time-lag depends on the force put out, the driving force. This will create action with pressure and move at the rate of the inverse square of the distance.

ML). It obeys the energy law, then? Control: Yes.

ML). We were speaking the other night of the time-lag in telepathic experiments. I still don't understand what becomes of the delayed message. Sometimes it apparently does not arrive for days.

YADA: The energy put out has dissipated itself in the first effort. The thought, however, remains within the auric field of the individual, and when it occurs to him again he will in that instant put a new force into it and it may then reach its goal.

ML) He makes a second trial without realizing that he is doing so?). Yada: Yes.

Yada: You see, in receiving outer stimuli, these act upon the nerves, and they are like wires, and the stimuli travel by impulses (again the quantum) to the cells of the brain. The cells of the brain are acted on by this, which is an electrical spark, a positive charge. But in striking the brain cells it must go thru an acid that is in the cells, and the granules that are in the acid of the cell are set into extremely rapid motion, creating heat. This heat creates oxidation, and it is in that instant of oxidation that the electrical impulse that first reached the brain cells comes back into an electrical impulse; and then it forms a very definite electro-magnetic line of force in what is called the psyche of the individual - and it is never erased again.

VLC) I would like to ask if the wave length or vibratory rate which is in the beam from the chest, which is sent out by emotion, is different from that which is sent out by the eye by concentration; or whether it is different from the rate of vibration of the aura in general?

Yada: These various rates of vibration can be summed up really in one field, and that can be called the feeling field, or the emotional self. This self governs all magnetic flows in the body except possibly the chemical flow itself. It does not consciously disturb that. The only time chemical flow is disturbed is by a conscious effort - and this, as a rule, takes many years to develop.

VLC) Another question: Is the halo that stands about six inches above the head in the form of a doughnut - when it comes down and rests on the head and becomes 10 to 20 ft. in diameter during a flow of energy from the body - is that the antenna that draws the force in from space? Or what is the function of the halo? Why does it come down and rest on the head nad become so enlarged?

Yada) It is because the emotions act upon it according to what the person is going to do. If it is a deeply emotional thing, the halo will expand greatly, depending upon the true depth of the emotions. If it is of a mild state there will not be very much expansion and it will not come down too close to the head.

I.P.) Yada, do all people have haloes of this shape. I understood from what you once said, that the shape of the aura is governed by the individual's former life on a different planet.

Yada) Yes, I said something like that - but as I have not seen all people I can only speak for some and say that it is true for many. No one knows all of Nature and no one can say positively about such things. Of those I have seen, many have such haloes, and some have not, and some have <u>no</u> halo.

ML) I wanted to ask about the wing-like extensions on the aura. Does the racial or religious background have any effect on it. One of our Associates thinks maybe these "wings" are connected with our religious beliefs - as to origin, I mean.

YADA) Oh, no - there are many who have not been brought up in the Christian religion even tho they live in the midst of it. And there are people of other races who have these formations. If religious teaching were at the bottom of it, the Chinese should have dragon wings - but they do not. No, these things come from former lives on other planets. . . As I have said, there are those who have lived on Mars and who have the "Martian Cross" in the eyes. Others have ridges in the hand indicating life on another planet, etc... In time man will find out that his solar system is not a vacant space by any means, so far as life goes.

(YADA withdraws)

Control, Ramon Natalli, 16th c. Italian astronomer)

"Sir, I am very much interested in that thing - never have I known of such a thing. Wehave been watching you make the measurements (of auras, haloes etc.) and it is fascinating. Yes, we can verify them. If you could see these lines of force running from the body you would be amazed. They are in various colors and hues, some very delicate, others very brilliant and flamboyant. Never have I been so fascinated by an instrument. -- (Q). Yes, you can have conficence in its findings. And in time you will have an instrument that will register the color vibrations and then you will appreciate this knowledge.

"These lines of energy that run from our bodies are largely giverned by our emotions. If you will measure the structure of these wings during an emotional upheaval, you will notice a definite quiver in them. Some will move sideways, others up and down (gesturing).

ML) Do you care to say whether Mr. Tesla has really been in contact with Mr. Cameron and has given him information?

NAT.) Excuse me a moment; I will try to get contact with his vibration - as you sometimes say, his aka cord. (Pause)... "I have now to say this: this gentleman of great learning has been in attendance on you for over 2½ years. It was not too long ago, however, that he was able to make himself known to you. He tells me that if you will sit down with pencil and paper and try to make mental contact with him, having this instrument with you, as you listen you will get impressions. And as you get them, extend the instrument in front of you and feel for his form. Also,he will endeavor to make instruments on his side and you will take this instrument of yours and get outlines of these, and you will then be able to draw them on paper. I do not know whether you know this, but he would not need an instrument like yours for handling measurements etc..

ML) Just to get this clear - with this instrument Mr. Cameron should be able to outline the form of anyone on your side with it?

NAT.) That is right. I should like to try this experiment. I will project myself outside this boy's body, and will you see if you can define my outline with this instrument?

(Pause, while VLC, using the instrument, outlines in the air the form of some invisible person sitting cross-legged on the floor, with his face toward the medium, his back toward Mr. Cameron, his knees under the table at which the medium is sitting. VLC describes the width of the person's shoulders and the cut of his hair in some detail. Natalli then takes control again of the medium and goes on with the conversation): "Sir, I am indeed very pleased. I thought you would expect me to be standing in front of the boy and facing you, so I sat down, to fool you, and turned to face him ... Sir, there you have an instrument that is to open a whole new world of research".....
